Profile

Having started my career writing software for the communications industry, I have moved on to work with various Management Information Systems. As the internet has grown, I have become an internet engineer, conversant with most of its languages and databases. I established my own company in 1992 through which most of the latter work was completed. I think my diverse experience from embedded software and safety systems for fusion reactors to websites and databases would be an asset to any company.

Achievements

- Developed web public facing and B2B insurance sales system using JSP and SQL Server.
- Developed web based back-office insurance based MIS system using ASP and SQL Server.
- Develop websites for local group of churches using PHP and MySQL, and local businesses.
